

Traffic surveys

A tool for making the right decisions

The composition of the traffic stream

7 basic categories

Profile survey

traffic intensity on the road

Directional survey

sources, destinations and directions of traffic flows, intersection movements including recording

Cordon survey

volume and intensity of traffic in selected sections

Intersection occupancy

occupancy of detectors in signalized intersections

Traffic intensity

the number of means of transport in a given unit of time - degree of traffic

Traffic stream properties

speed, density, flow

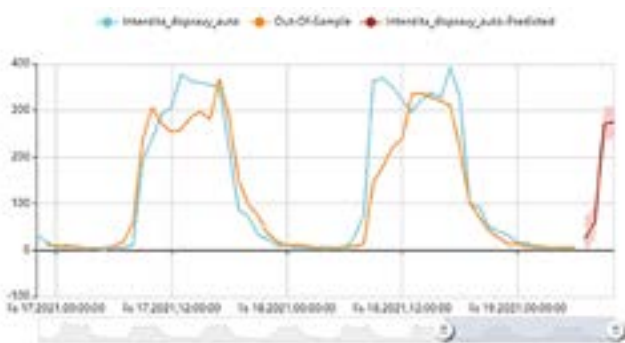

Cyclists, pedestrians, in-line

measuring the intensity of non-motorized traffic

- **WE PROCESS** the analysis
- **WE PROVIDE** a solution
- **WE SUPPLY** data in the form of simple statistics and graphs
- **WE SAVE** time and money
- **WE PROVIDE** financing and sufficient human resources

Telematics

- traffic prediction
- transport digital twin
- analytical tools for traffic optimization

Data services

- processing of speed, violation and collision maps
- passporting of technical communication devices (street lights, traffic signs and others ...)
- inspection of the state of roads (potholes, obstacles in traffic, quality of horizontal road markings)
- we will create graphic and static processing (Dashboard) for the client

from the center - right
